EDUCATION

Indian Institute Of Information Technology, Guwahati

Bachelors in Technology, CSE; CPI: 9.42

Assam, India

Dec 2020 - May 2024

Scholar English Academy

Class XII - 95%

Gujarat, India

June 2018 - March 2020

Metas Adventist School

Class X - 93.2%

Gujarat, India

June 2016 - March 2018

EXPERIENCE

Software Engineer

Yext

Sept 2025 – Present

Hyderabad/Hybrid

- Contributed to **Yext Scout**, an AI-powered enterprise platform, developing **n8n** backend workflows, AI evaluation agents, admin dashboards, and role-based access management to enable platform integrations and product capabilities, contributing to a **30%** increase in client adoption.
- Engineered high-throughput, distributed **ETL and data ingestion pipelines in Go** for the Yext Knowledge Graph while owning enterprise implementations and production initiatives; improved scalability and reliability and reduced high-risk production flags from **60% to 25%**.
- Designed and implemented an internal **AI-powered issue triage and automation system** that decomposes product issue tickets into actionable engineering sub-tasks, generates resolution summaries, and automatically routes issues to appropriate engineering teams reducing manual effort by **40%**, improving incident handling and engineering workflows.
- Engineered an **AI-powered Chrome extension** for Yext technical learning using **Chrome Built-in AI (Gemini Nano)**, Prompt API, and Summarization API to generate source-grounded flashcards and certification-style challenges for Yext documentation used by **60%** of the company strength .

Software Engineer

MAQ Software

December 2023 – August 2025

Hyderabad, India

- Tech Stack: Type Script, C#, .NET, React, JavaScript, NodeJS, Jest, Azure, Azure Table Storage, Microsoft Bot Framework, SQL
- Developed a **VS Code extension** for Power Bi report exports in TMDL language, applying **compiler design principles** (using ANTLR for lexing and parsing) and implementing features like **code formatting** and **auto-complete** to enhance user experience.
- Optimized memory usage by **33%** and reduced processing time by **50%** for features like auto-complete and hover, by designing a **custom data structure** to efficiently replace the default ANTLR-generated parse tree.
- Developed a C# script to automate schema generation using a CI/CD pipeline leveraging the **One-Branch** template, **completely eliminating manual effort**.
- Developed automated unit test cases using **Jest** framework, reducing manual testing efforts and cutting testing time by **80%**.

TECHNICAL SKILLS

Languages: Go, Type Script, JavaScript, Python, C#, C++, Java, SQL

Frameworks / Libraries: React, Node.js, Express.js, .NET, Jest

AI / LLM Tooling: n8n, LLM Agents & Evaluation Pipelines, Prompt Engineering

Distributed Systems & Data: ETL Pipelines, Concurrency, Fault Tolerance, Low-Latency Systems

Cloud / DevOps: Azure, CI/CD (One-Branch), Git, GitHub, Docker, Firebase

Databases: MongoDB, SQL Server, Azure Table Storage
